

Subdivision Design & Supply

From initial inquiry to supply, the ADLT lighting team is here to support you through your land development project.

Huapai Triangle, Auckland Subdivision – 2016–2022 (still on-going)

The 2000+ subdivisions installed throughout New Zealand in the last 10 years are a testament to our land development experience. Our Porchester Vicpole can be found all around New Zealand, looking as good as the day we installed them.

Our subdivision design to supply experience is natural to us, and we are here to support you from start to finish.

We are with you through all the hard work to the end. We have a team of qualified lighting designers and actively work with councils around New Zealand. In the initial stages, we can provide you with Concept Lighting Designs to assist with your Resource Consent application. That way, you have one point of contact to coordinate the pricing, order, delivery and commissioning of your private and public lighting requirements.

We are fluent in all appropriate lighting design standards, local council requirements and bylaws. Taking into consideration aesthetics, pole locations, lighting performance and landscaping. We know the rules; for example, the Auckland council has a 2m clearance requirement for trees.

It is common practice to utilise a peer review process, consulting with other lighting designers to ensure the designs meet all requirements. When everyone is happy with the design and all the documents are in order, the developer can apply to council for Engineering Plan Approval (EPA). Finally, the product can then be ordered through ADLT.

In total, ADLT has supplied over 160 Porchester poles for the Huapai Triangle Subdivision project.

How can we help?

Free lighting design service

- You have as much involvement as you like, we want to know the needs of your subdivision e.g. poles and colour choice - we have the options
- Ability to do the custom "fancy stuff". Poles can be customised; extensive colour options, shape, size, branding - whatever sort of pole you want, we can bring it to life
- You can 100% rely on ADLT for design and supply from start to finish
- Follow up service from ADLT

Comprehensive understanding of compliance process

- Technical road lighting knowledge
- We are abreast of all designer compliance processes - we have been dealing with that for so long, we know the different idiosyncrasies
- We can take all that time and effort away from you so you can relax, as we have 30 years experience doing this

Fast turnaround

- Quick reaction times: Designs, emails, phone calls, meetings - we get back to you

Quality Control

- Our Poles are sourced from Australia and are carefully inspected on arrival for damage and defects, before being shipped to the customer

Higher quality of build

- Not bulk made - transitions on the welds are more aesthetically pleasing

Huapai Subdivision

A classic example of an Auckland subdivision supplied with Cree XSP luminaires and Vicpole Porchester light poles. This design was to AS/NZS 1158 standard and was a combination of Category P and V roads.
